Reconstruction

Name: _____

After the American Civil War ended in April 1865 the United States went through a period known as Reconstruction. The Union (the Northern states) had defeated the Confederacy (the Southern states that had left the Union).

From 1865 to 1877 the two sides worked to put the United States back together.

During Reconstruction, people disagreed on how to readmit the Southern states, or bring them back to the Union. They also disagreed on what to do about African Americans who had won freedom from slavery.

Reconstruction

Name: _____

Andrew Johnson

While the war was still going on, President Abraham Lincoln made a plan to readmit Confederate states quickly. Lincoln was killed in April 1865. Andrew Johnson then became president. He wanted to carry out Lincoln's plan.

Some members of the U.S. Congress, called Radical Republicans, disagreed with Lincoln and Johnson. They wanted to punish the South. They also wanted to protect African Americans. In 1867 the Radical Republicans took control of Congress. The period that followed is called Radical Reconstruction.

What is a cell?

Cells are the basic building blocks of living things. The human body is composed of trillions of cells, all with their own specialised function.

Name: _____

WHAT IS A CELL?

Cells are the basic structures of all living organisms.

Cells provide structure for the body, take in nutrients from food and carry out important functions.

Cells group together to form tissues, which in turn group together to form organs, such as the heart and brain.

Our cells contain a number of functional structures called organelles.

These organelles carry out tasks such as making proteins, processing chemicals and generating energy for the cell.

The nucleus? is based at the centre of the cell and is the 'control room' for the cell.

The genome is an organism's complete set of genetic instructions and is found within the nucleus.
